

Sustain Queensland 2025

A co-hosted summit on Queensland's transition economy and industry decarbonisation

Queensland stands at a pivotal moment in its sustainability journey. As industry and academia unite to advance regional decarbonisation, clean finance, circular innovation and community transitions, we have a unique opportunity to build on this momentum. So how can we continue to collaborate across sectors to shape a sustainable economic future for Queensland?

Sustain Queensland 2025 brought together changemakers from across sectors to explore these frontiers through:

- dynamic panel discussions
- thought leadership dialogues
- an afternoon of insight and exchange.

Co-hosted by the UQ Business School and Business Council for Sustainable Development Australia (BCSDA), this event highlighted collaboration, credibility, and action in building a just, resilient and sustainable Queensland economy.

It was an inspiring afternoon filled with insight, collaboration, and bold ideas as we brought together an audience of over 115 changemakers from across sectors to tackle some of the most pressing themes:

- accelerating industry decarbonisation
- the transition economy and corporate accountability
